1 WELCOME

IPCAM is an integrated wireless IP Camera solution. It combines a high quality digital video camera with network connectivity and a powerful web server on your desktop from anywhere on your local network or over the internet.

The basic function of IPCAM is transmitting remote video on the IP network. The high quality video image can be transmitted with 30fps/25fps speed on the LAN/WAN by using H.264 hardware compression technology.

The IPCAM is based on the TCP/IP standard. There is a WEB server inside which could support Internet Explore. Therefore the management and maintenance of your device is simplified by using the network to achieve the remote configuration, start-up and to upgrade the firmware.

You can use this IPCAM to monitor special places such as supermarket, bank and school. Also controlling the IPCAM and managing image are simple by clicking the website through the network.

1.1 Features

- ◆ Adopts high performance and powerful media processor ,built-in (ARM+DSP) and high speed video protocol processor
- ◆ Standard H.264 video compression algorithm to satisfy the transmission of high definition video in narrow bandwidth network
- ◆ Provides RS485, various decoder protocols can be built in
- ◆ Network self-adapting function: adjust stream and encoding frame rate automatically according to network bandwidth
- ◆ Supports IE/Firefox/Google/Safari browser or any other standard browsers

- ◆ Supports mobile watch
- ◆ Supports WEP,WPA and WPA2 Encryption
- ◆ IR night vision (Range:50m)
- ◆ Supports dual-stream
- ◆ Supports remote viewing & record from anywhere anytime
- ◆ Multi-level users management with password protection
- ◆ Embedded Web Server for users to visit by IE
- ◆ Motion detection alert via email or upload image to FTP
- ◆ Time is not lost after power failure, and support NTP
- ◆ Supporting Dynamic IP (DDNS) and UPnP LAN and Internet
- ◆ Supports RTSP port number
- ◆ Supports multiple network protocols: HTTP /TCP /IP /UDP /FTP /DHCP /DDNS /UPNP /RTSP
- ◆ Providing CMS software to manage or monitor hundreds of cameras

1.2 Packing List

Untie the package and verify the items with the following list:

- IPCAM×1
- Wi-Fi Antenna×1 (only available for wireless model)
- DC Power Supply×1
- Network Cable×1
- Quick Installation Guide×1
- CD×1 (Includes IPCAM user manual、IP camera tool、H.264 Camera Client)
- Mounting bracket×1(option)
- Warranty Card×1

NOTE: Please Contact us immediately in case of any damaged or missing parts.

1.3 Product views

1.3.1 Front View

Figure 1.1

- 1 Induction IC
- 2 Infrared LED: 36 IR LEDs
- 3 LENS: CMOS sensor with fixed focus lens
- 4 WIFI Antenna: Wireless Antenna

1.3.2 Interface

Figure 1.2

- 1) **Power Interface:** Connect the external power adapter, request for 12V/2A power.
- 2) **485 Cradle head interface:** Support the standard 485 cradle head protocol. You can control cradle head if it has been connected well with the camera.
- 3) **Audio output interface:** The jack is used to plug external speakers.
- 4) **Reset button :** Press and hold on the reset button for 10 seconds. Releasing the reset button, the password will back to the factory default administrator password. The default administrator password is admin. You must power on the camera before reset.
- 5) **LAN:** 10/100M adaptive Ethernet interface. Through this interface, IPCAM can be connected with various network devices, such as hub, router, etc.
- 6) **Audio input interface:** The jack is used to plug external microphone or linear audio input signal .The audio input mode is decided by which kind of audio input device you use. You had better configure it first.(Please see chapter 3.15 about How to configure it)

1.4 Preparations before use

1.4.1 Software installation

- 1) Put the CD in the CD drive of your computer. Open the CD; find the software per instructions;
- 2) Double click **IPCamSetup.exe** and install the software per instruction.

Figure 1.3

3) Click **Next** to complete the software installation.

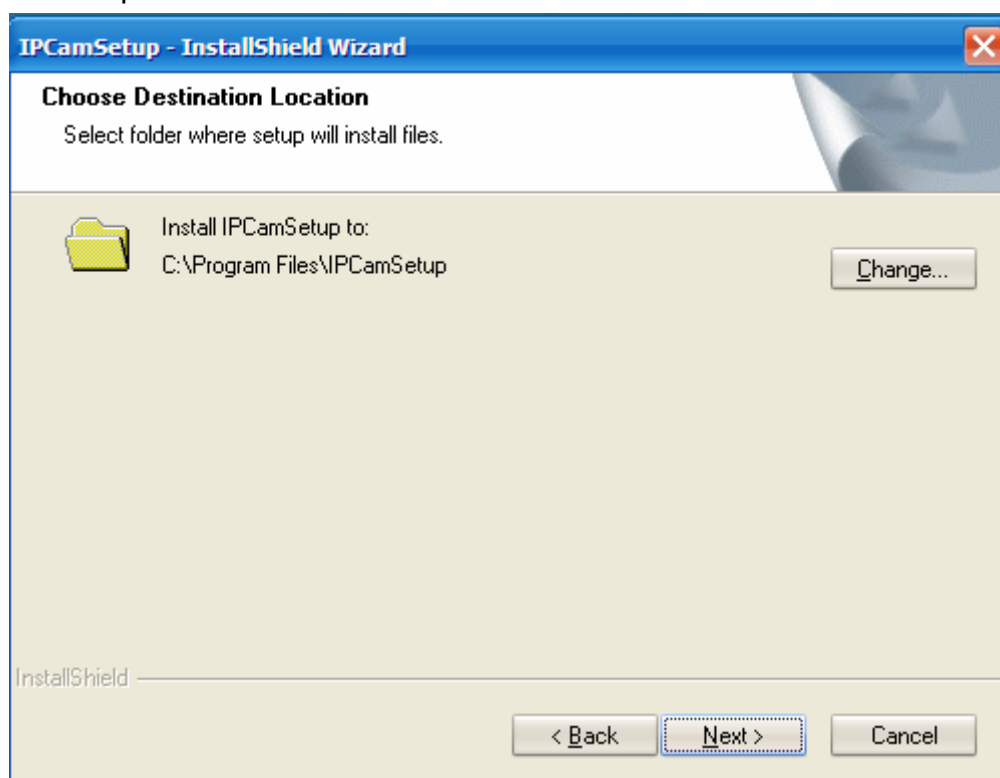

Figure 1.4

4) Select the folder where setup will install then click Next.

Figure 1.5

5) Click Install.

An icon appears on the desktop automatically.

NOTE: If you use Windows7 and could not find the icon on desktop after installing the IP camera tool, please check if the path of the camera software is correct.

For example, if it was pointing to C:\Windows\System32\IPCamera.exe.

Then fix this by pointing the shortcut to the correct path C:\Windows\SysWOW64\IPCamera.exe.

The shortcut should work without any problems.

CAUTION: Before installing and using the product, please read the following precautions carefully and make sure they are fully understood.

Use only the power adapter attached with the product. Using unauthorized power adapters may cause damage to your IP Camera.

1.4.2 Hardware preparation

Follow the steps below to set up your camera hardware connections. Make sure to follow each step carefully to ensure that the camera operates properly.

(1) Adjust the antenna at the back of the camera.

(2) Plug the network cable into the camera and then into your Cable/DSL router.

(3) Plug the power adapter into the camera and then into the power outlet.

CAUTION: Make sure to only use the power adapter supplied with IPCAM. Using a

non-approved power adapter may damage the camera.

- (4) The camera takes approximately 10 seconds to start up before it displays an IP address on the **IP Camera Tool** (details: [2.1](#))
- (5) When the camera is powered and network cable plugged correctly, the network light near the network jack will turn on.

2 SOFTWARE OPERATION

2.1 IP Camera Tool

When the Device has been mounted properly, you can double click the icon “IP Camera.exe”

and a dialog box as Figure 2.1 will pop up.

Figure 2.1

The software searches for the IPcam automatically over the LAN.

Our company has two series: H.264 and MJPEG. M shows that the camera is MJPEG series. H shows that the camera belongs to H.264 series. FI8602W belongs to H.264 series.

There are 3 cases:

- (1) If no Camera found in LAN. After about 1 minute of searching, the Result Field will show “not found IP Server” and the program shuts off automatically.
- (2) If IP Cameras have been found within LAN. All the IP Cameras will be listed and the total number is displayed in the result field as shown in Figure 2.1.
- (3) The IP Cameras installed within LAN do not share the same subnet with the monitoring PC. A prompt is displayed with a “**Subnet doesn’t match, dbclick to change!**” message. Click the left mouse button to choose the prompt and click the right mouse, choose **Network Configuration** to set the IP address of the Camera to the same subnet as the LAN. (Figure 2.5) You can choose obtain IP from DHCP server or set a static IP for the camera. (Figure 2.4)

NOTE: If you could not find the camera’s IP on the IP camera tool.

Please check if DHCP is enabled on your router, or disable MAC address filter.

Make sure that the firewall doesn’t block the camera.

Six Options

Choose the IP Camera list and right click; there are six options, Basic Properties, Network Configuration, Upgrade Firmware, Refresh Camera List, Flush Arp Buffer and About IP Camera Tool as shown Figure 2.2.

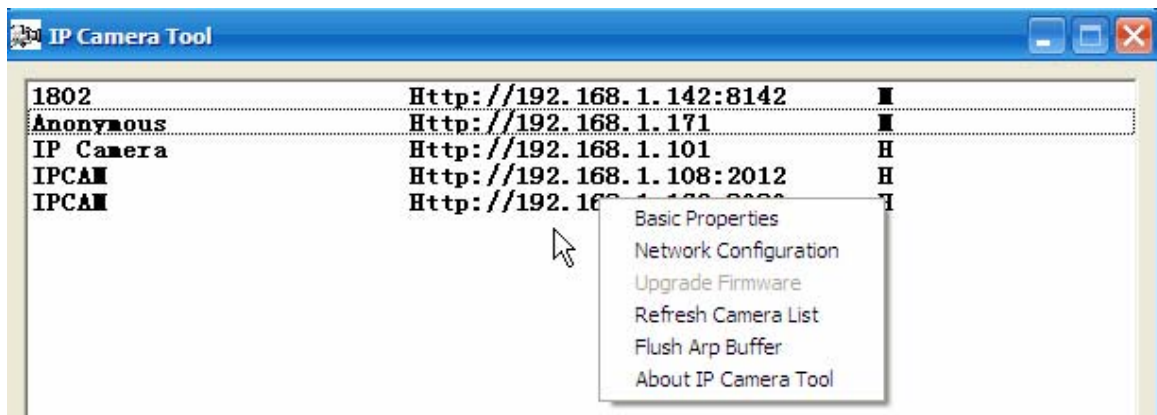

Figure 2.2

● Basic Properties

There are some devices information in the Basic Properties, such as **Device ID**, **System Firmware Version**, and **Web UI Version**. (Figure 2.3)

If there are several cameras on the list, you can choose basic properties to check the device ID and recognize the IP address, belong to which camera you set up, For example Device ID is 00606E8C5058, the same MAC ID sticker is found at the bottom/back of the camera.

Each camera has its own MAC ID. Sometimes, if camera's IP is not found on the IP Camera Tool. The firewall may be blocking it, therefore you can add this MAC ID to your router and give it a fixed IP or add the MAC ID as a trusted site.

Figure 2.3a

Note: H series doesn't have Web UI Version.

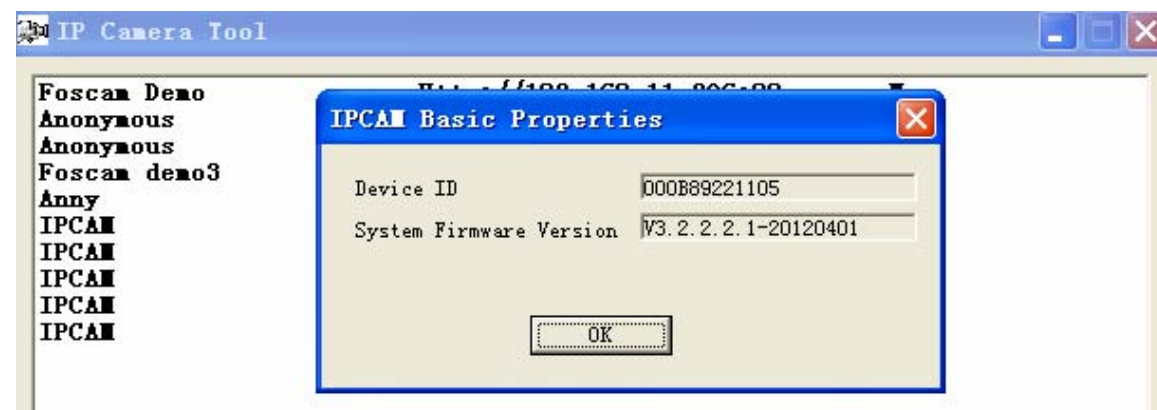

Figure 2.3b

● Network Configuration

This page will allow you to configure the Network parameters.

Figure 2.4

Obtain IP from DHCP server: If checked, the device will obtain IP from DHCP server. In other words, the camera will have a dynamic IP. (Make sure the Router which the camera connects has DHCP function and DHCP is enabled). H series can't obtain IP from DHCP server.

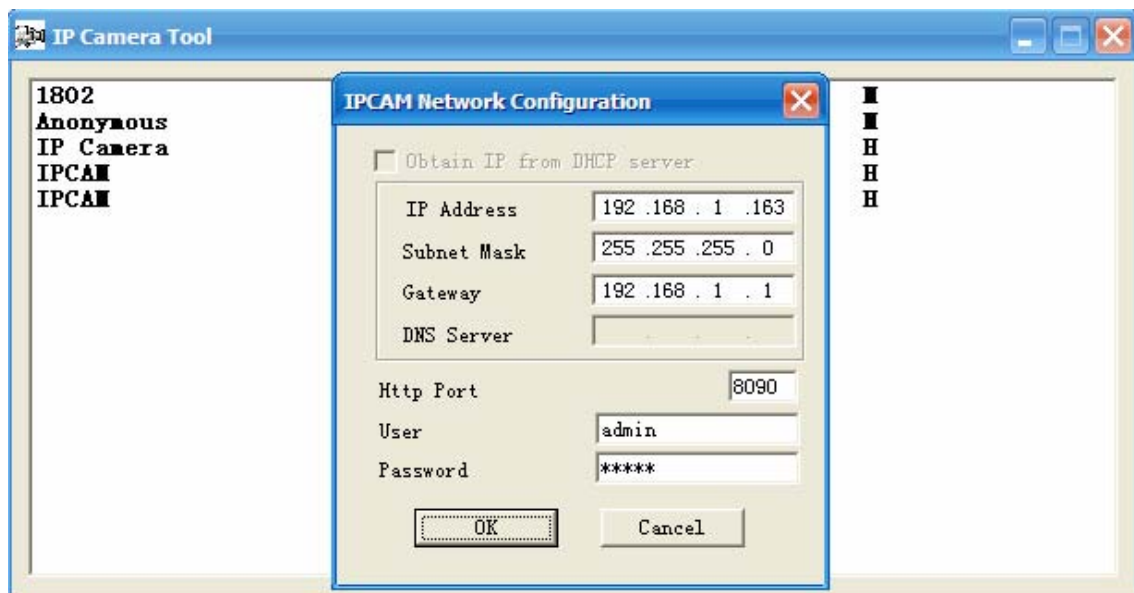

Figure 2.5

IP Address: Fill in the IP address assigned and make sure it is in the same subnet as your computer or router. (I.e. the first three sections are the same)

Subnet Mask: The default subnet mask of the equipment in our LAN is: 255.255.255.0. You can find the subnet mask in the basic information of your router or the locally-attached of your PC.

Gateway: Make sure it is in the same subnet with PC's IP address. The gateway is your router's LAN IP.

DNS Server: IP address of your ISP network provider. You can find the DNS server in your router or check the locally-attached address of your computer. Your PC contains your PC's IP address, gateway and DNS server. Normally, there are two DNS servers. Here you can also set the DNS server the same with gateway. H series can't see the option.

Http Port: The default Lan port is 80. You can set another port number, such as port 8005, 8100.etc.

H series:

User: Default administrator user name is admin

Password: Default administrator password is admin.

M series:

User: Default administrator user name is admin

Password: Default password is null, there is no password.

NOTE: If the prompt "Subnet doesn't match, dbclick to change!" appears, please enable DHCP and choose obtain IP from DHCP server or set camera's IP address and gateway once again.

● Upgrade Firmware

Enter the correct User and Password to upgrade system Firmware and Web UI. If you upgrade the camera, you must **upgrade system firmware** first and then **upgrade web UI**. Or it may damage the camera.

Please download the firmware package under the correct type of your camera before upgrade. Follow the upgrade documentation in the package carefully to upgrade. Read the readme.txt file first before you upgrade.

CAUTION: Please don't upgrade the firmware freely. Sometimes, your camera may be damaged if configured wrong during the upgrade. If your camera works well with the current firmware, we recommend not upgrading.

NOTE: 1 If you download the firmware, please check if bytes of the two .bin file are exactly the same with the size in readme. If it fits, you can upgrade it. If not, please download the firmware again until the bytes are exactly the same with the official size. Otherwise, your camera will crash by the firmware which you selected.

Figure 2.6

2 You can not upgrade the software by IP Camera Tool for H.264 series, you can only upgrade the firmware form the IE.

● Refresh Camera List

Refresh camera list manually.

- **Flush Arp Buffer**

When wired and wireless of the camera both are fixed IP address. You may encounter an issue with not being able to open the camera webpage. You may try to use flush Arp buffer.

- **About IP Camera Tool**

Display the version of the IP Camera Tool.

2.2 Camera Login

You can access the camera through the **IP Camera Tool** or **IE, Firefox, Google Chrome, Safari or other stand browser** directly.

(1) Double click the IP address of the IP Camera listed (Figure 2.1).The browser you use will be opened automatically and display the following page. (Figure 2.8)

(2) You can also access the camera by IE browser directly by typing in the camera's IP address (Figure 2.7). For example:

Figure 2.7

Figure 2.8

Camera supports three-level users management: admin, user and guest.

The default "admin" username and password are all "admin", the default "user" username and password are all "user", and the default "guest" username and password are all "guest".

There are two modes to login. If you use PC to login, please choose the first mode. If you use mobile to login, please choose the second mode. (Figure 2.9)

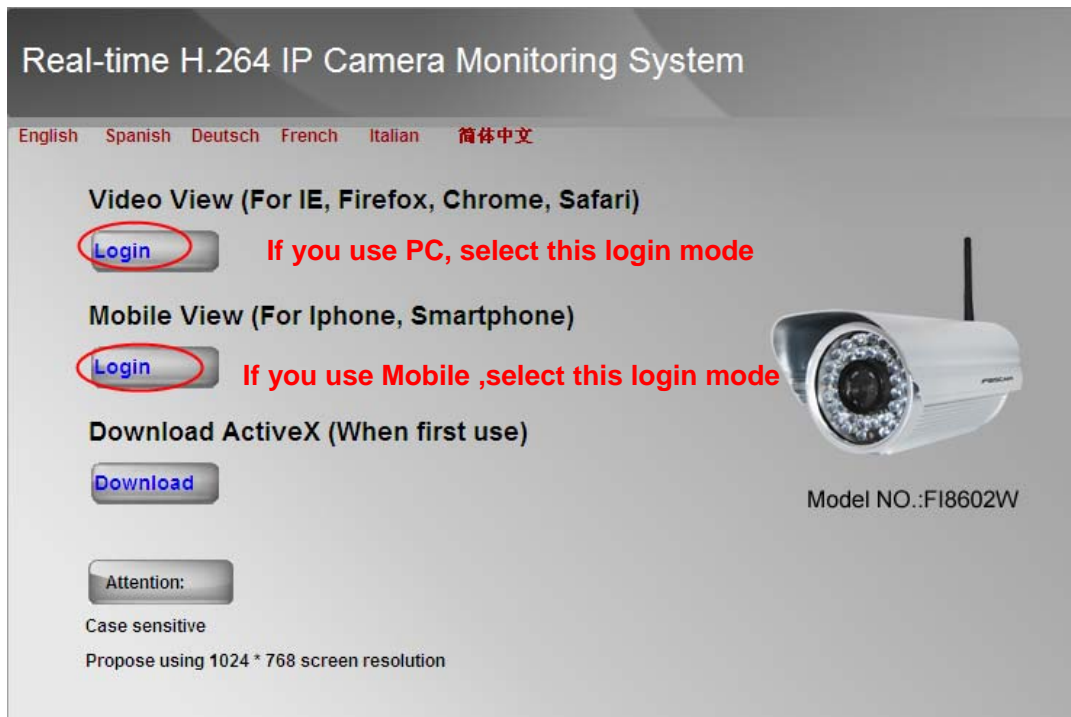

Figure 2.9

First time you use the IPCAM, you must download the ActiveX.

If you use IE, you can download ActiveX from the login UI. If you use Firefox, Google Chrome, safari or others, you should download QuickTime Player as the ActiveX from other website.

For IE

Please click . Install the ActiveX after download.

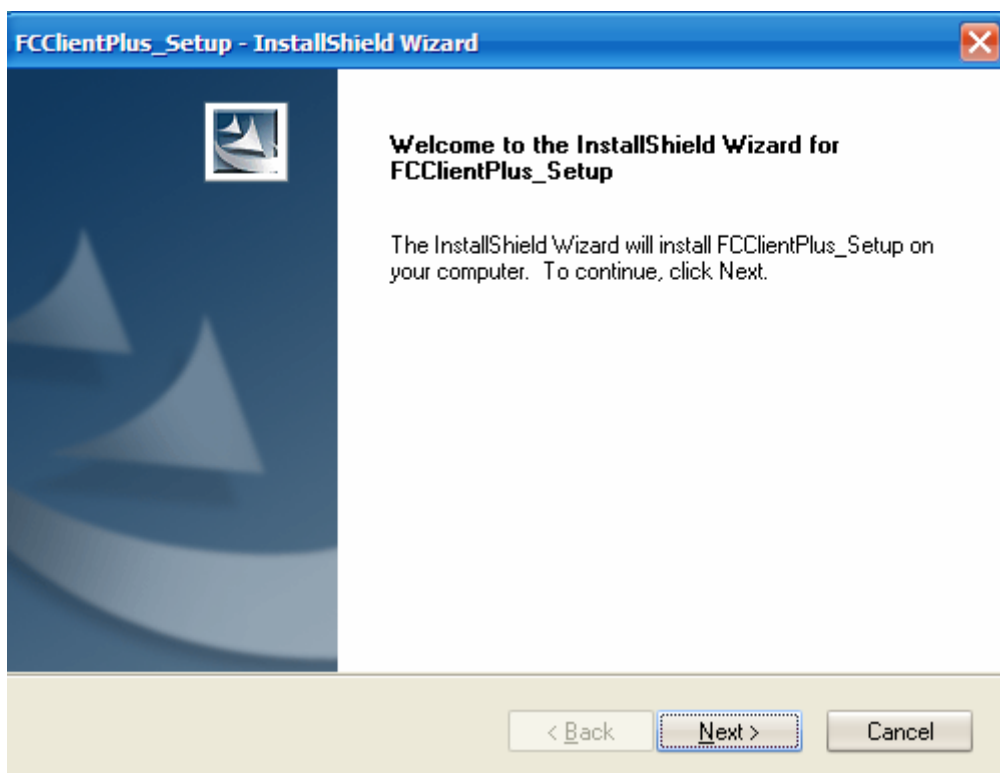

Figure 2.10

Click next.

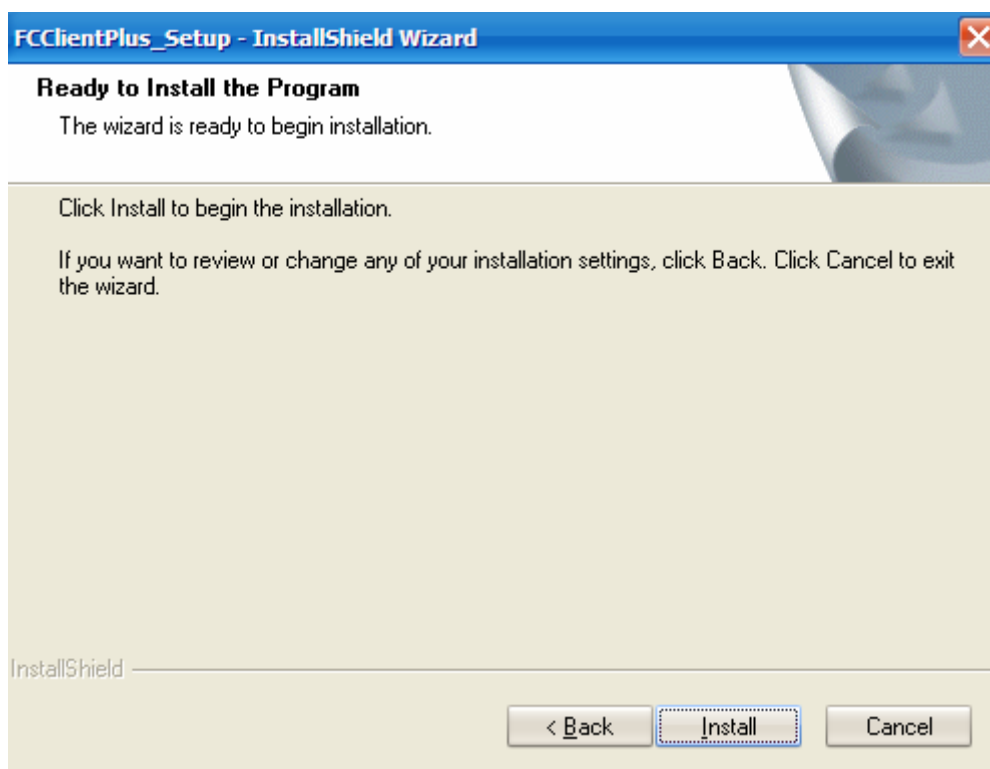

Figure 2.11

Click Install.

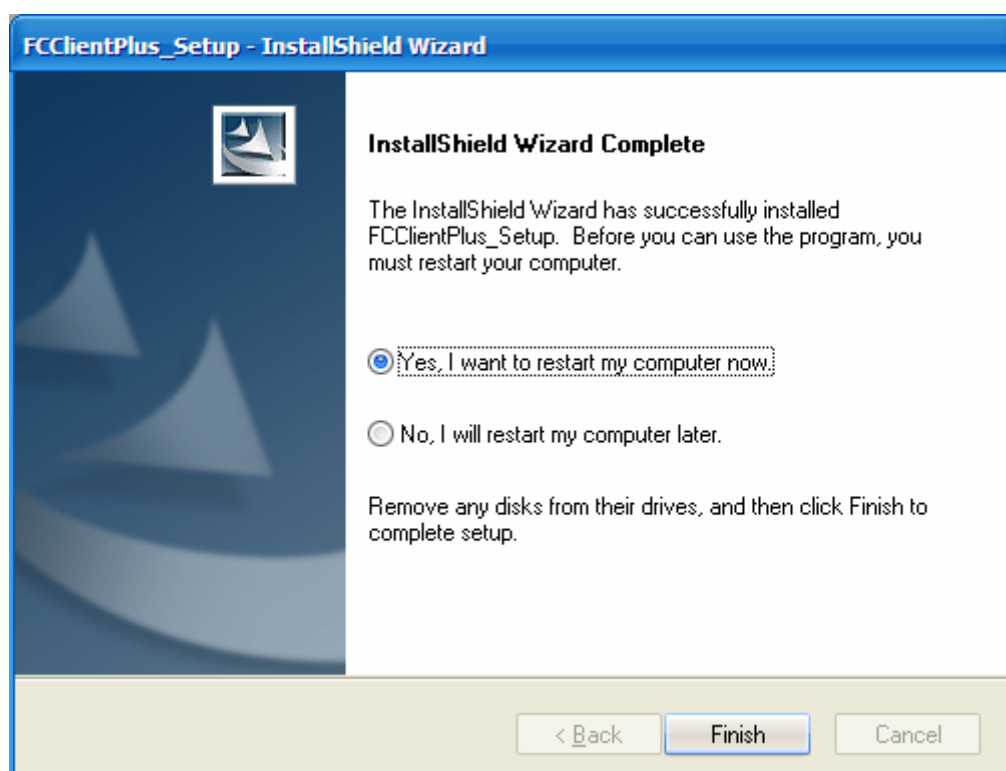

Figure 2.12

Click Finish and the computer restarts upon installation completion.

The first time you login the UI. You may receive an ActiveX prompt as the picture below. (Figure 2.13)

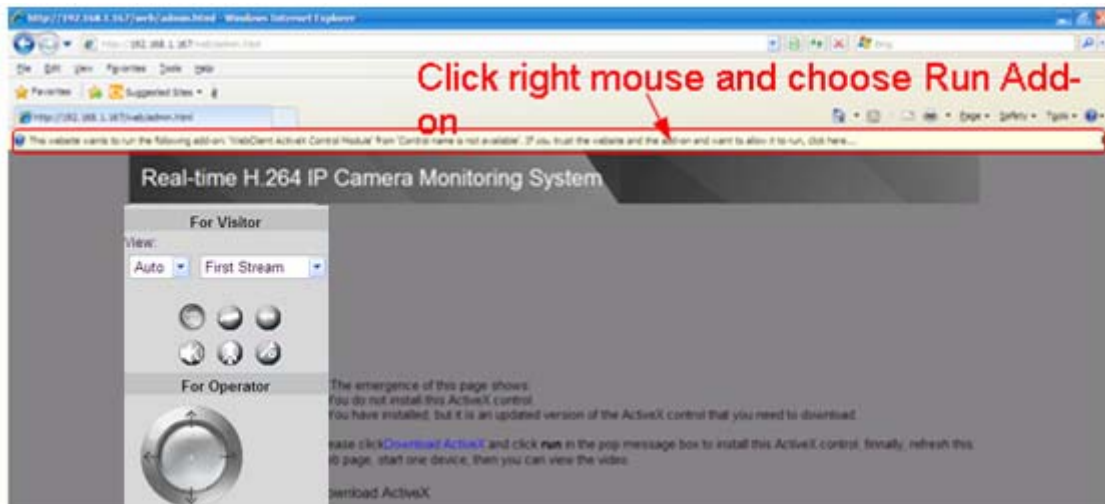

Figure 2.13

Right click on the active prompt and choose **Run Add-on**(Figure 2.14).

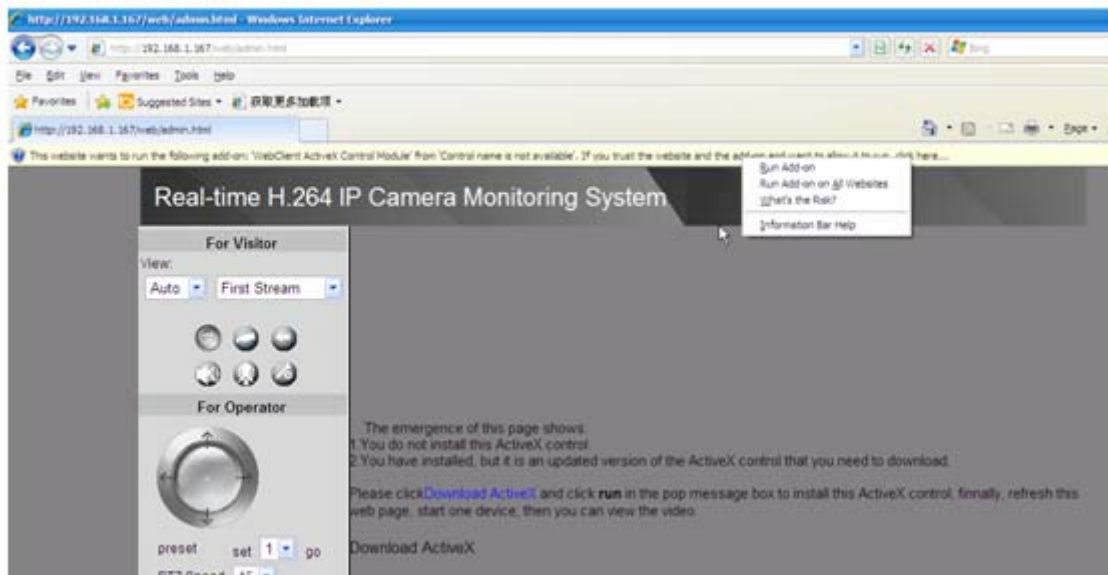

Figure 2.14

Select **Run** on the next prompt (Figure 2.15), you will see a live video. (Figure 2.16)

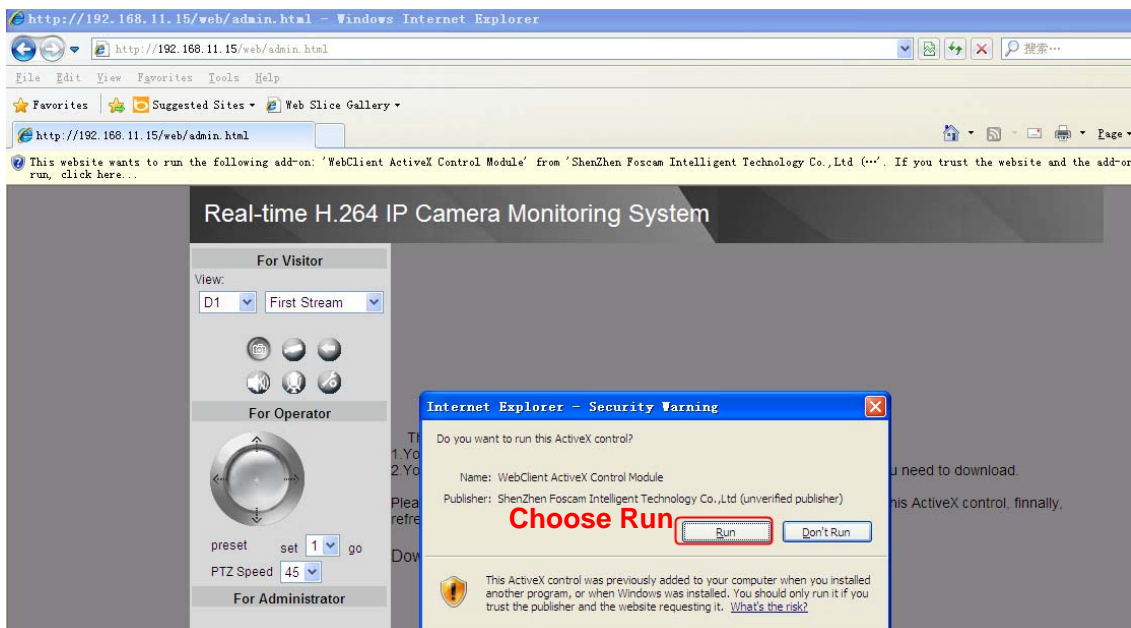

Figure 2.15

Figure 2.16

NOTE: If you could not view living video after running the ActiveX, only a red cross  in the center of the video or just a black screen. Please change another port number to try. Make sure all firewall or antivirus software on your computer does not block the active download and installation. If you are unable to run the ActiveX control, try shutting down the firewall or antivirus program.

For Firefox, Google Chrome and Safari

Fill in user name and password then login.

It may ask you for user name and password again before login the UI.

After you enter user name and password, you will see the living video.

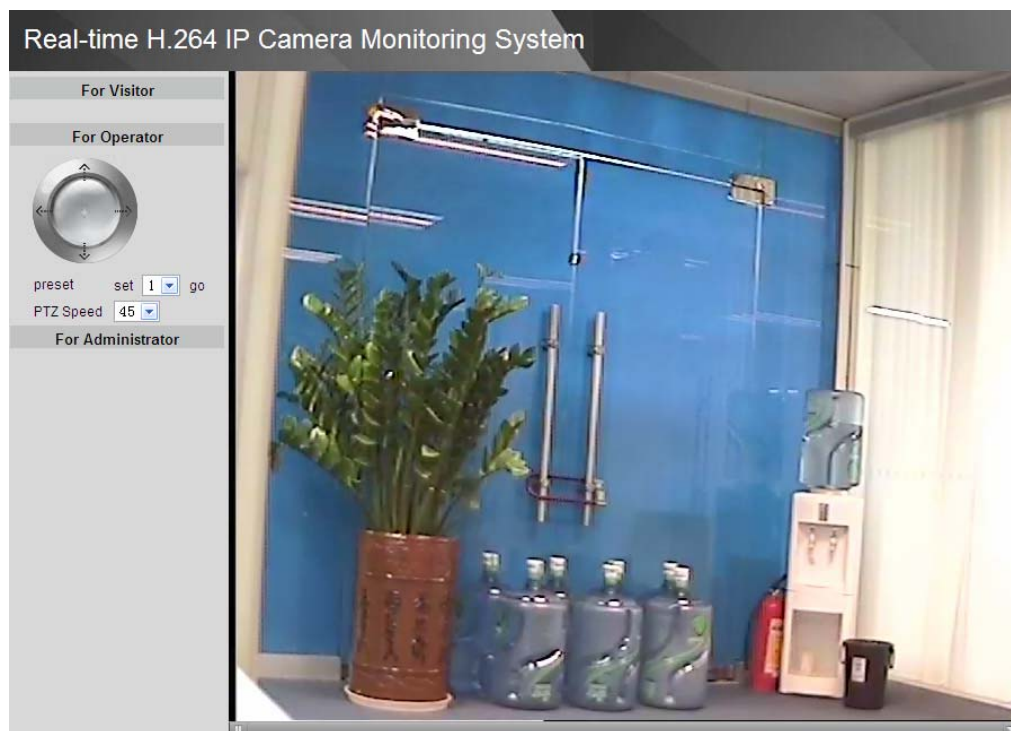

Figure 2.17

2.3 For Visitor

For IE browser

Figure 2.18

Figure 2.19

There is a status column below the view window (Figure2.19).

- 1) The current state of IPCAM
- 2) After the view has been digital amplified, click the icon, the view will be digital narrowed.
- 3) Click the icon, the view window will be digital amplified.
- 4) Click the icon, the view window will restore the original size.

View: The resolution contains D1, CIF, QCIF and Auto. You can choose First Stream or Second Stream to adjust the view window.

Note: When the network bandwidth is bad you'd better select Second Stream and the video will be more fluency.

: Click this icon, the camera will snap a picture and store it to a predetermined path.

: Click the icon. The camera will begin recording and store the recorded file to the folder you set. And the status column will display REC when recording. Click again it will stop recording.

Figure 2.20

: Click the icon, it will pop up a player. And you can see the videos you have stored.

Figure 2.21

: If the camera has connected with microphone or other line-in input signal, click this icon, you can hear the sound around the camera by the earphone or speakers that connected with PC.

: Click the icon and talk to the microphone that connected with PC. If the camera has connected with speakers or other output audio device, people around the camera can here your voice. Click the icon again, stop this function. You had better configure it first. (Please see chapter 3.15 about How to configure)

: Setting the storage path of photos and videos. The default path is D disk.

Note: Firefox, Google Chrome and Safari doesn't have these functions because the Activex does not support it.

2.4 For Operator

This camera doesn't have cradle head, so you cannot use this function. If you want to use PTZ, you must connect it with 485 cradle head interface firstly and then configure it properly (see 3.9 chapter about how to configure).

Figure 2.22

- 1 Click this icon, camera will rotate up
- 2 Click this icon, camera will rotate down
- 3 Click this icon, camera will rotate left

4 Click this icon, camera will rotate right

Preset: You can create preset positions for the camera to go to directly from one position to another. A total of 8 preset positions can be configured.

Pls follow the steps below to create preset positions:

- 1 Adjust the shooting area to a desired position.
- 2 Click set 1 to define your home position.
- 3 To add additional preset positions, pls repeat step1-2.

When the camera rotates to other position, only choose the preset num you have set and click go, the camera will go to the desired position.

If you want to delete one position, only reset the num.

Onscreen Mouse Control

You can click on a place on the screen to indicate the camera move direction you prefer. For example, you can click on the upper-right corner of the screen, and the cameras lens will move toward the upper-right direction.

When the icon has three arrows, the speed of the rotation is fastest. And when the icon has one arrow, the speed is lowest.

Figure 2.23

Put the mouse at the center of the living video, you will see the icon of the magnifying glass (Figure 2.24). Press the left mouse and you can use the optical zoom.

Note: The camera doesn't support the function because the lens is not the optical zoom.

Figure 2.24

PTZ Speed: Here you can set moving speed .This function can be used only when the IPCAM is a high-speed camera .It has no effect at a constant speed camera. So this camera cannot support the PTZ speed.

2.5 For Administrator

Click **For Administrator**, you will see the **Device Information**.

It contains Device ID, firmware version of the camera and other status of the camera.

Device Information	
Device ID:	IPCAM
Device Type:	C1F0S2Z3N0P0L0
Network Connection:	LAN
Current Client:	0
Device Firmware Version:	V3.2.2.2.1-20120401
Device Embedded Web UI Version:	2.5.02.3
Mac Address:	00:0b:89:22:11:05
IP Address:	192.168.11.252
Subnet Mask:	255.255.255.0
Gateway:	192.168.11.1
Primary DNS:	192.168.11.1
Secondary DNS:	192.168.158.1
Start Time:	2012-4-7 13:51:1

Figure 2.25

Device ID: It displays “IPCAM”. This ID is different form the camera name. You can set any camera name you like for the camera in “For Administrator—> Video—>Parenthesis Options” and the camera name can be showed at the video window, but the device ID will always display IPCAM.

Current Client: It shows that how many people are viewing the video. For example, the Current

Client shows 0, that means no people are viewing the video. If someone have logged in the camera but do not open the video, the Current Client will not change.

3 How to configure settings in For Administrator

3.1 Date & Time Settings

There are four models for you to adjust time: Manual setting, Sync with computer time, Network Time Protocol and Keep current time, choose one model and adjust the camera time. Then choose Time zone.

Manual settings: The administrator can enter the date and time manually. Note that the date and time format is [yyyy/mm/dd] and [hh:mm:ss].

Network Time Protocol: It is a protocol which synchronizes computer clocks by periodically querying an NTP server.

Interval: The interval time between last time and next time that the camera adjust time with Ntp Server.

Time zone: Select the appropriate time zone from the list.

Date&Time Settings

Current date & time: 2011-09-20 19:47:47

Adjust

☐ Manual setting

Date: 2011-09-20 (yyyy-mm-dd) Time: 19:46:02 (hh:mm:ss)

(1971-01-01 ~ 2036-12-31)

☐ Sync with computer time

PC Time: 2011-09-20 14:46:34

☒ Network Time Protocol 1

Ntp Server: time.nist.gov

Interval: 01 hours

☐ Keep current setting

☒ Automatically adjust clock for daylight saving time changes ³

⁴

Figure 3.2

The camera will adjust the daylight saving time automatically if you select “Automatically adjust clock for daylight saving time changes”.

3.2 User Settings

The camera has set up 3-level user permissions, user names are admin, user, guest, and the default passwords are admin, user, guest too.

Different user has different permission. Only admin can access the For Administrator page. User cannot access the For Operator page to operate PTZ. Guest only can see the live view window.

Please reset the passwords at first using and prevent unauthorized users login the camera.

Click **Apply** to save these settings.

User Settings		
User Name	Password	Re-type password
admin	•••••	•••••
user	••••	••••
guest	••••	••••

Figure 3.3

Note: You cannot change the user names and all passwords cannot be null.

3.3 Basic Network Settings

IP Configuration Type contains two types: Fixed IP Address and Dynamic IP Address. Set the appropriate type for you. Keep the camera in the same subnet of your router or computer.

Fixed IP Address: Select this option to manually assign a static IP address to the Network Camera.

Dynamic IP Address: Select this option to obtain an available dynamic IP address assigned by the DHCP server each time the camera is connected to the LAN.

Basic Network Settings	
LAN Settings	
IP Configuration Type:	Fixed IP Address ▼
IP Address:	192.168.11.253
Subnet Mask:	255.255.255.0
Gateway:	192.168.11.1
DNS Configuration Type:	Manual DNS ▼
Primary DNS:	192.168.11.1
Secondary DNS:	202.96.134.133
HTTP	
HTTP Port number:	80 (80 or 1024~49151)
RTSP Port number:	554 (554 or 1024~49151)
RTSP Permission checksum:	<input checked="" type="radio"/> On <input type="radio"/> Off (Note: You need to restart the machine, this setting will only take effect)

Figure 3.4

If you want to set a static IP for the camera, you should keep the camera in the same subnet of

your router or computer. The DNS Configuration Type has two types: Manual DNS and From DHCP Server. If you don't know the subnet mask, gateway and DNS server, you can check your computer's local area connection. It contains all the information.

The step is **Control Panel**→**Network Connections**→Double click **Local Area Connections** → Choose **General**→**Properties**. You will see all the information in it.

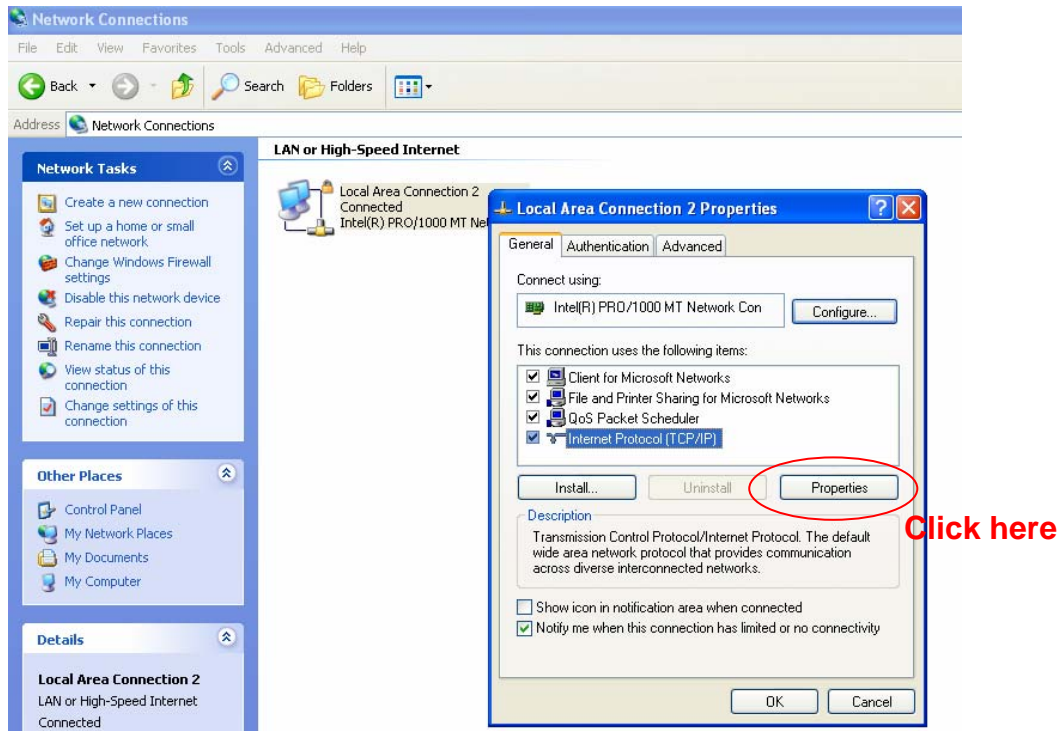

Figure 3.5

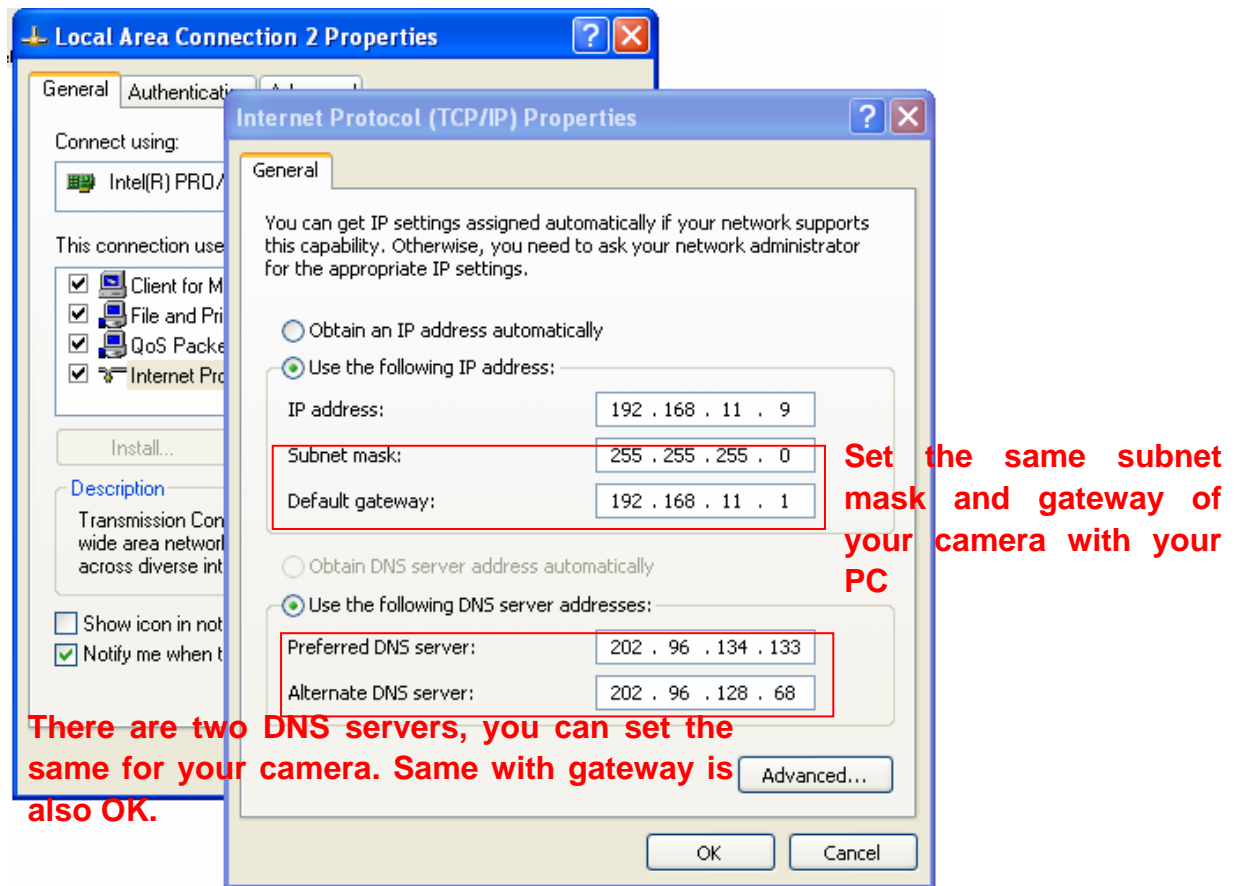

Figure 3.6

If you don't know the DNS server, you can use the same settings as the default Gateway.

HTTP Port number: The HTTP Port can be used to access the IPCAM on the LAN. Usually, it is 80. You can set any number between 1024 and 49151 too.

After all settings, click Apply. You will see the following picture, click OK, and re-connect the camera.

Figure 3.7

RTSP port number: Usually, it is 554. You can set any number between 1024 and 49151 too. Click Apply and the camera will reboot.

Enter [rtsp:// IP:RTSP port number/11](#) or [rtsp:// IP:RTSP port number/12](#) into the VLC, you can see the real-time preview. WAN IP or LAN IP is OK. If the RTSP port number is 554, you can directly enter the following url: [rtsp:// IP/11](#) or [rtsp://IP/12](#) . The number "11" shows that you will use first stream. The number "12" shows that you will use second stream. For example:

Enter [rtsp://192.168.11.169/11](#) in the VLC.

RTSP Permission Checksum

On: Select it and you need to enter the login username and password when you view the

Shenzhen Foscam Intelligent Technology Co., Limited

Tel: 86 755 2674 5668 Fax: 86 755 2674 5168

real-time preview in the VLC.

Off: Select it and you do not need to enter the login username and password.

Figure 3.8

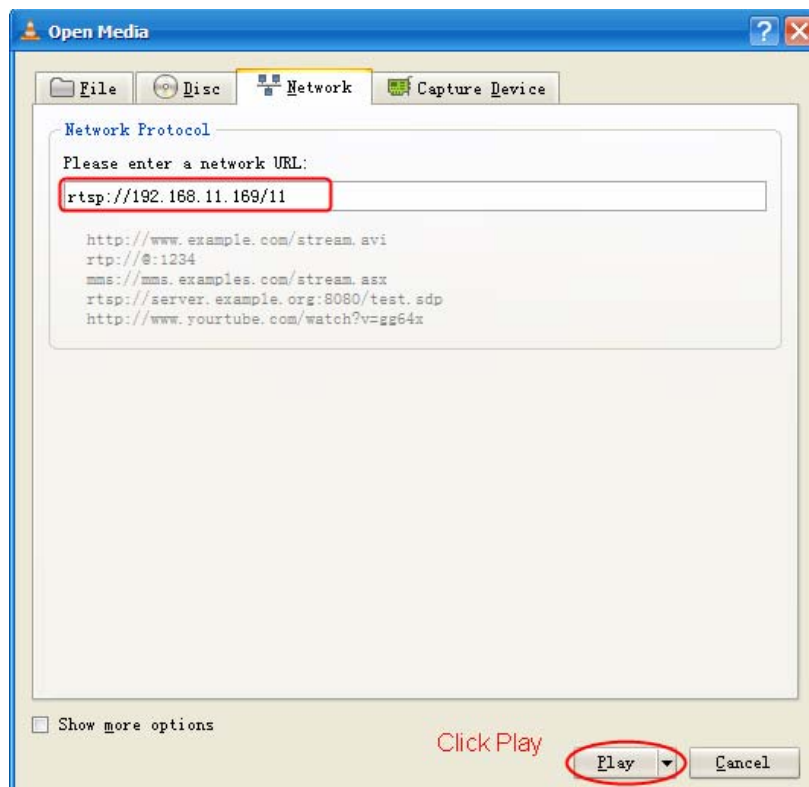

Figure 3.9

You need to enter the user name and password if you select on for RTSP Permission Checksum . Click OK and you can see the real-time preview.

Figure 3.10

Figure 3.11

Note: 1 You'd better not change the HTTP and RTSP port number at the same time, because you cannot submit successfully.

2 After changing the RTSP or HTTP port number, the camera will restart.

3 If you cannot play the video in the VLC player, please check the port mapping. You can read Quick Installation Guide about How to configure port forwarding.

3.4 Wireless Settings

Please view how to set Wireless Settings in Quick Installation Guide.

3.5 Remote Access

Please view how to set DDNS Settings in Quick Installation Guide.

Your Domain:

cyjun321.DynDNS.org

UPnP Port Forwarding☒ Enable ☐ Off

Figure 3.12

Upnp Port Forwarding: If you select Enable, that means you allow the IPCAM to open ports on the router automatically so that the video streams can be sent out form a LAN. To utilize of this feature, make sure that your router supports UPNP and it is activated. Usually, we recommand you do it manually. . (for more details:see Quick Installation Guide)

Please click Apply after filling in all the information.

3.6 Email Settings

If you want the camera to send emails when motion has been activated, **Email Settings** will need to be configured.

The screenshot shows the 'Email Settings' configuration page. It includes fields for SMTP server name, authentication, user name, password, sender email, send-to recipients, subject, and message. Red boxes and numbers highlight specific areas: 1 points to the SMTP server name field; 2 points to the SMTP port dropdown (set to 25); 3 points to the user name and password fields; 4 points to the sender email field; 5 points to the send-to recipient fields; 6 points to the subject and message fields; and 7 points to the 'Apply' button.

Email Settings

SMTP server name: smtp.qq.com Http Port 25 ☐ SSI ☐

Authentication: ☒ On ☐ Off

User Name: 893923458

Password:

Sender: 893923458@qq.com

Send To: sanshao27@sina.com (Email Address 1)
 sanshao27@sohu.com (Email Address 2)
 sanshao27@126.com (Email Address 3)

Subject: alarm

Message: Alarm with pictures!
 (the max length is 255)

Figure 3.13

Make sure your mailbox for sender supports SMTP. Three recipients can be added to receive images. **SMTP port** is usually set as 25. If SMTP server supports SSI, you should choose it. The subject and message can not be Chinese characters.

3.7 FTP Settings

If you want to upload images to your FTP server, you can set **FTP Settings**.

The screenshot shows the 'FTP Settings' configuration page. It includes fields for Server Address, Server Port, User Name, Password, Passive Mode, and Path. The 'Apply' and 'Cancel' buttons are at the bottom.

FTP Settings

Server Address: 192.168.0.50

Server Port: 21

User Name: apple

Password:

Passive Mode: ☒ On ☐ Off

Path: /

Figure 3.14

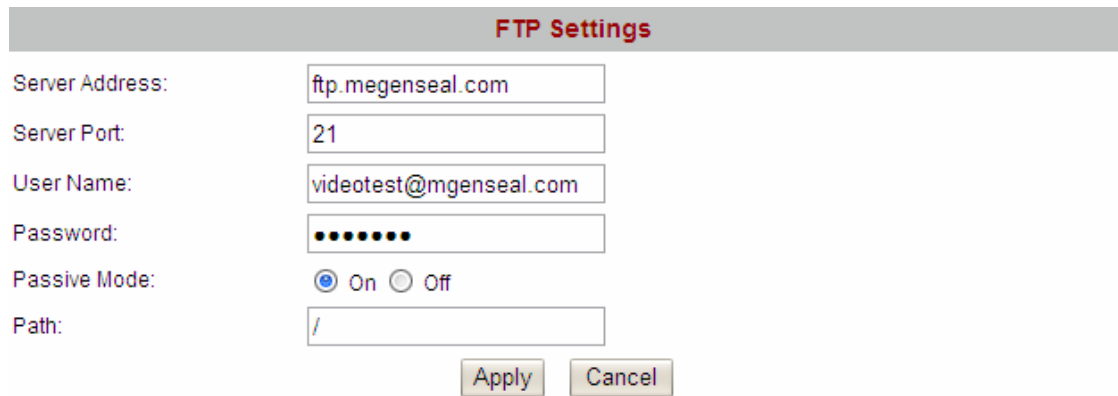

Figure 3.15

FTP server: If your FTP server is set up in LAN, you can set as Figure 3.14.

If you have a FTP server which you can access on the internet, you can set as Figure 3.15.

FTP Port: Usually the port is 21

Path: The path of FTP that you plan to store images.

If the FTP server mode is passive, choose on, or else, choose off.

Click Apply after settings.

3.8 Auto Capture

The camera can capture pictures automatically at interval time if you have set auto capture.

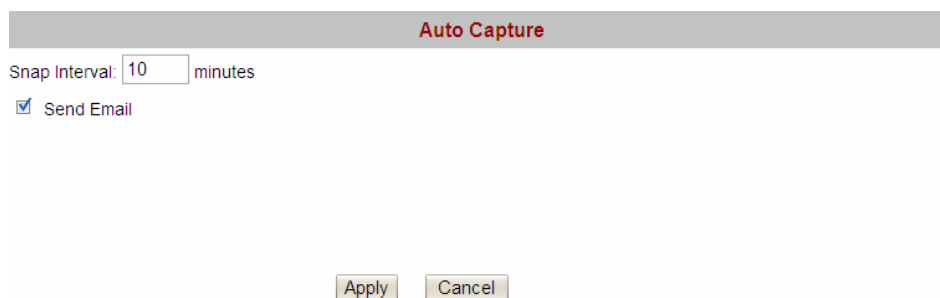

Figure 3.16

Snap interval: Set snap interval time. The pictures will be stored to the disk you set (you can set the storage path under “For Visitor”).

Send E-mail: Select it, the camera will send email to you with the picture it has captured. Make sure you have set E-mail correctly.

Click Apply after settings.

3.9 Terminal

If the camera has connected with cradle head, you need set terminal firstly.

Find the related information about the cradle head at the cradle head user manual and fill the following options. Click Apply and save your settings.

Figure 3.17

3.10 Motion Detection

If the user wants to monitor a special region, he should select motion detection. IP CAM supports four detection regions. Choose the options dialog box before window1, window2, window3, window4 to enable the corresponding areas. For example, choose window1. Then you can see a box with a number at living video (Figure 3.18).

Figure 3.18

Move your mouse on the regional box, you can drag the regional box to any position in the video.

Figure 3.19

Move the mouse to the bottom right corner of the regional box .When the mouse pattern changes to “↖”, you can change the size of the detection area.

Figure 3.20

Move  right or left and adjust the sensitivity. Click apply after all settings. The regional box will blink with red colour when something moving at your detection area.

Figure 3.21

Note:1 If you add the date&time to the video, don't put the detection window on the time area or else the camera will alarm when the time change.

2 If you have not set the motion detection area, the camera will not alarm at any time.

3 Firefox, Google chrome, Safari doesn't support the function because the activex can not support it.

3.11 Alarm

Set alarm and It will send email or upload images when motion has been detected.

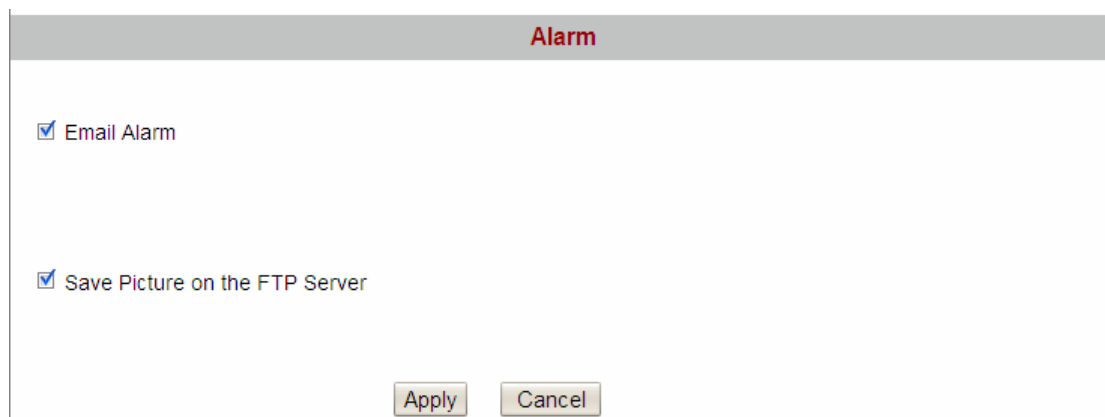

Figure 3.22

Email Alarm: Camera will send emails when motion is activated. Make sure you have set Email Settings.

Save Picture on the FTP Server: To upload images to an FTP server when motion is detected, make sure you have must set FTP Settings.

Click Apply after settings.

3.12 Schedule

If you want the camera alarm during the time you wish, or all the time, please choose Schedule and set time range for motion alarm.

Schedule

☒ Use the week mode
 ☐ Use the work mode
 ☐ All times

day start1~end1 start2~end2 start3~end3

<input checked="" type="checkbox"/> Sun	00 : 00 ~ 24 : 00	00 : 00 ~ 00 : 00	00 : 00 ~ 00 : 00
<input checked="" type="checkbox"/> Mon	00 : 00 ~ 24 : 00	00 : 00 ~ 00 : 00	00 : 00 ~ 00 : 00
<input checked="" type="checkbox"/> Tue	00 : 00 ~ 24 : 00	00 : 00 ~ 00 : 00	00 : 00 ~ 00 : 00
<input checked="" type="checkbox"/> Wed	00 : 00 ~ 24 : 00	00 : 00 ~ 00 : 00	00 : 00 ~ 00 : 00
<input checked="" type="checkbox"/> Thu	00 : 00 ~ 24 : 00	00 : 00 ~ 00 : 00	00 : 00 ~ 00 : 00
<input checked="" type="checkbox"/> Fri	00 : 00 ~ 24 : 00	00 : 00 ~ 00 : 00	00 : 00 ~ 00 : 00
<input checked="" type="checkbox"/> Sat	00 : 00 ~ 24 : 00	00 : 00 ~ 00 : 00	00 : 00 ~ 00 : 00

Figure 3.23

There are two ways to set the alarm.

1) Alarm at any time when motion is detected.

Select All times and apply you settings, the camera will alarm at any time when motion is detected.

2) Specify an alarm schedule.

If you want the camera to alarm during a specify time, you can select Use the week mode **or** Use the work mode and set time range.

Click apply, the settings what you have done will take effect.

If you click cancel, the settings will come back to the status before your settings.

If you want to reset all time range, click clean.

NOTE: Adjust system time before set schedule.

3.13 Video

Video

Video Settings

Video format: PAL

First Stream

Resolution: D1

Bit Rate: 1536 kbps

Maximum Frame Rate: 25 fps

Key Frame Interval: 50 (2-150)

Bit Rate Control: ☐ CBR ☒ VBR

Image Quality: 1 (The smaller the value, the better the image quality, the larger the stream control)

Second Stream (mobile)

Resolution: CIF

Bit Rate: 384 kbps

Maximum Frame Rate: 25 fps

Key Frame Interval: 50 (2-150)

Bit Rate Control: ☐ CBR ☒ VBR

Image Quality: 4 (The smaller the value, the better the image quality, the larger the stream control)

Parenthesis Options

Time Stamp: ☐ On ☒ Off

Camera Name: ☐ On ☒ Off

Camera Name: IPCAM (Can not input ~!@#\$%^&*()_+=?/:)

Apply Cancel

Figure 3.24

Video format: The format contains two kinds: NTSC and PAL. One camera only has one format and you cannot change it.

Resolution: The camera supports First stream: D1(704*576),CIF(352*288),QCIF(176*144), Second stream: CIF(352*288),QCIF(176*144). The higher the resolution is, the clearer video will become. But the code flux will become larger too, and it will take up more bandwidth.

Bit rate: Generally speaking, the larger the bit rate is, the clearer video will become. But the bit rate configuration should combine well with the network bandwidth. When the bandwidth is very narrow, and bit rate is large, that will lead to video can not play well.

Note: Bit rate of the first stream range :32~2048Kpbs; Bit rate of the second stream range: 32~512Kpbs.

Maximum frame rate: When the video format is PAL, the maximum frame rate is 25 fps. When the video format is NTSC, the maximum frame rate is 30 fps. You should lower frame rate when the bandwidth is limited. Normally, when the frame rate above 15, you can achieve fluently video.

Key Frame Interval: The time between last key frame and next key frame

Bit rate control: It has two models: CBR and VBR. If you choose CVR, video encoder will be coding on the basis of bit rate you set. If you choose VBR, video encoder will be coding not only on the basis of bit rate, but also consider video quality.

The resolution of the second stream: The smaller the value, the better the image quality,

Parenthesis options: The camera name and time can be loaded to the video screen through this option .If you set as following picture (Figure 3.25), you will see the video as Figure3.26. The camera name cannot be Chinese characters.

Parenthesis Options

Time Stamp: ☒ On ☐ Off

Camera Name: ☒ On ☐ Off

Camera Name: (Can not input ~!@#\$%^&*()_+=?/:)

Apply

Cancel

Figure 3.25

Figure 3.26

3.14 Image Settings

Adjust the quality of the video by setting the image parameters.

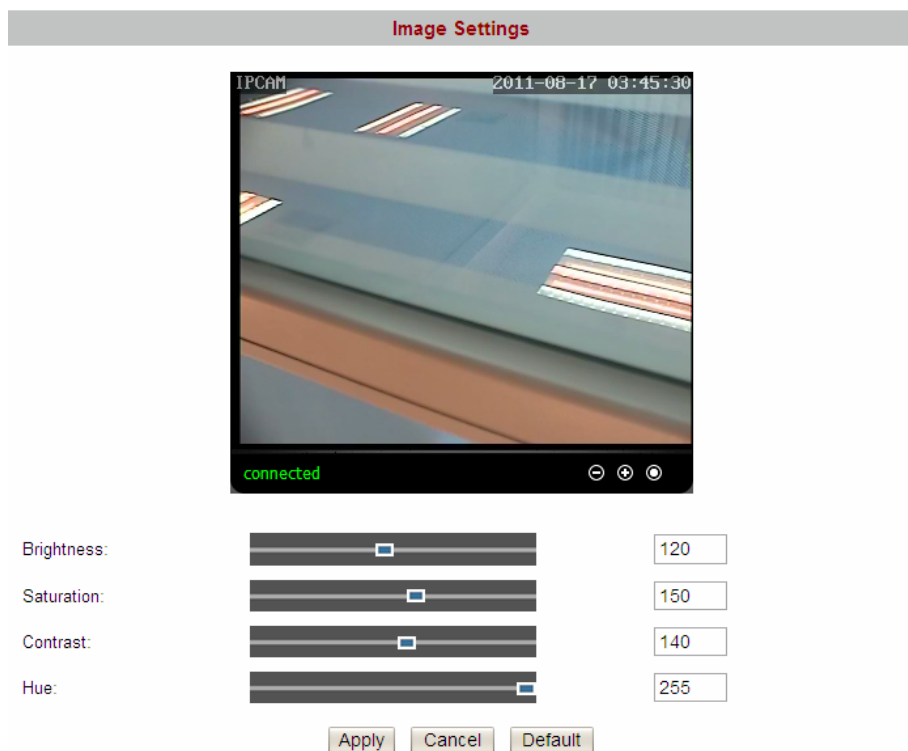

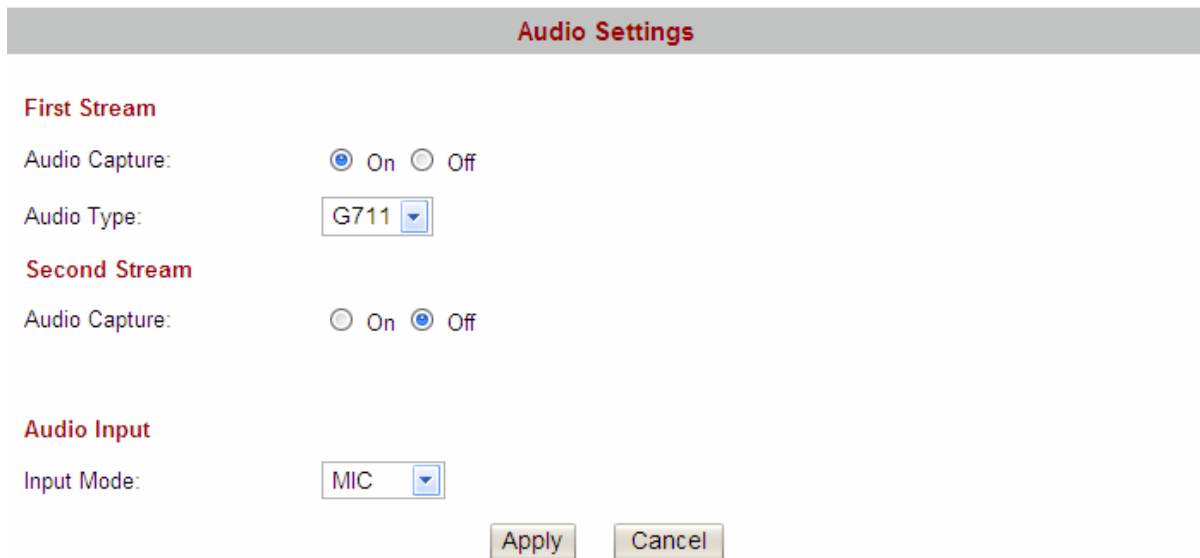

Figure 3.27

Brightness, saturation, contrast and hue are used to adjust the quality of the video. Camera will save your settings if you click apply. If you want to quit settings you have done and restore the status before your setting, please click cancel. The function of Default is used to restore the initial settings.

3.15 Audio

The image shows a screenshot of the 'Audio Settings' dialog box. It has a title bar 'Audio Settings' in red text on a grey background. Below the title bar, there are three sections: 'First Stream', 'Second Stream', and 'Audio Input'. Under 'First Stream', 'Audio Capture' has 'On' selected (radio button) and 'Off' is unselected. 'Audio Type' is a dropdown menu showing 'G711'. Under 'Second Stream', 'Audio Capture' has 'Off' selected (radio button) and 'On' is unselected. Under 'Audio Input', 'Input Mode' is a dropdown menu showing 'MIC'. At the bottom right, there are two buttons: 'Apply' and 'Cancel'.

Figure 3.28

Audio capture

On: Add audio signal when coding. Choose it and the audio will be better.

Off: Not add audio signal when coding.

You can choose whether open audio capture for first stream or second stream.

Audio type

It has two types: G711 and G726. You can choose any one.

Note: If you use Firefox, Google Chrome, Safari, you must choose G711. Because the ActiveX doesn't support G726.

Audio input

MIC: If the audio input interface of the camera has connected with microphone, here you should choose MIC.

Line in: If the audio input interface of the camera has connected with linear audio input signal device, here you should choose Line in.

Which one you choose is decided by the device that connect with audio input interface.

Click Apply, you can see a dialog box as below:

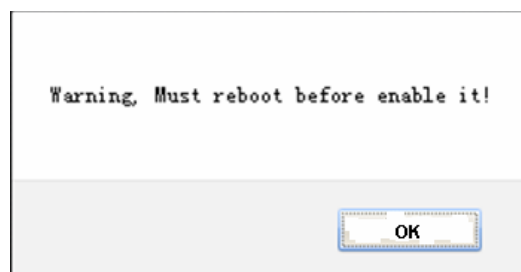

Figure 3.29

Click OK to reboot camera.

If you give up the settings you have done, click cancel to restore the status before your setting.

Back to the "For Visitor" and click the icon , you can here the voice around the camera.

3.16 Initialize

Reboot: Click reboot, the infection is the same as plug the power and re-plug it.

Factory default: Click it, all parameters will return to factory settings.

Backup setting data: If you don't want to quit all parameters that you've set. You can click **save** and all the parameters you set will be stored as a parameters bin file.

Restore: Click browse, choose the correct bin file and then click ok to get all parameters which you set before.

Upgrade: Click **Browse**, choose the correct bin file and then click **OK** to upgrade. Don't shut down the power during upgrade.

The screenshot shows a web interface titled "Initialize". It contains two main sections: "Initialize" and "Firmware Upgrade".

- Initialize Section:**
 - Reboot:** A button labeled "Reboot".
 - Factory Default:** A button labeled "Factory Default".
 - Backup Setting Data:** A button labeled "Save".
 - Restore:** A text input field, a "Browse..." button, and an "OK" button.
- Firmware Upgrade Section:**
 - Upgrade:** A text input field, a "Browse..." button, and an "OK" button.

Figure 3.30

3.17 Back

This will take you back to the video window.

4 Other Settings

4.1 Use Mobile to login

If the camera has been linked to Internet, set the parameters of the camera and router. Make sure the camera can be accessed by domain name and WAN IP.

For example, the WAN IP is 183.37.54.137, the domain name is ycxgwp.no-ip.info. Then open the mobile IE, enter the following URL, you can login the camera. <http://183.37.54.137/mobile.html> or <http://183.37.54.137/wap.wml> or <http://ycxgwp.no-ip.info/mobile.html> or [http:// ycxgwp.no-ip.info /wap.wml](http://ycxgwp.no-ip.info/wap.wml) .

If the HTTP port num isn't 80, you should add the port num to the URL:

<http://183.37.54.137: portnum/mobile.html>

or [http:// ycxgwp.no-ip.info: port num/mobile.html](http://ycxgwp.no-ip.info:port num/mobile.html)

4.2 For MAC OS

The MAC OS can't install the exe application program. If you want to access the camera, you should know the IP or domain name, then enter the url to the IE and access the camera.

5 APPENDIX

5.1 Frequently Asked Questions

NOTE: Any questions you would meet, please check Network connections firstly. Check the working status revealed by the indicators on the network server, hub, exchange and network card. If abnormal, check the network connections.

5.1.1 I have forgotten the administrator password

To reset the administrator password, you had better unplug the network cable firstly. After that, press and hold down the RESET BUTTON about 10 seconds. Releasing the reset button, the password will turn to the factory default.

Default administrator username: admin	password: admin
Default user username: user	password: user
Default guest username: guest	password: guest

5.1.2 Subnet doesn't match

Check whether your ipcamera in the same subnet of your computer. The step is **Control Panel→Network Connections→Dbclick Local Area Connections → Choose General→Properties.**(Figure 3.5/3.6) Check subnet mask, IP address and gateways. When you set IP address please make sure they are in the same subnet. Otherwise you can't access camera.

5.1.3 No Pictures Problems

The video streaming is transmitted by the ActiveX controller. If ActiveX controller isn't installed correctly you will see no video image. You can resolve this problem by this way:

Download ActiveX controller and set the safety property of IE in the PC when you view it first time: IE browser→Tool→Internet Proper→Security→Custom Level→ActiveX control and Plug-ins. Three options of front should be set to be "Enable", The ActiveX programs read by the computer will be stored. As follows:

Enable: Download unsigned ActiveX controls

Enable: Initialize and script ActiveX controls not marked as safe

Enable: Run ActiveX controls and plug-ins

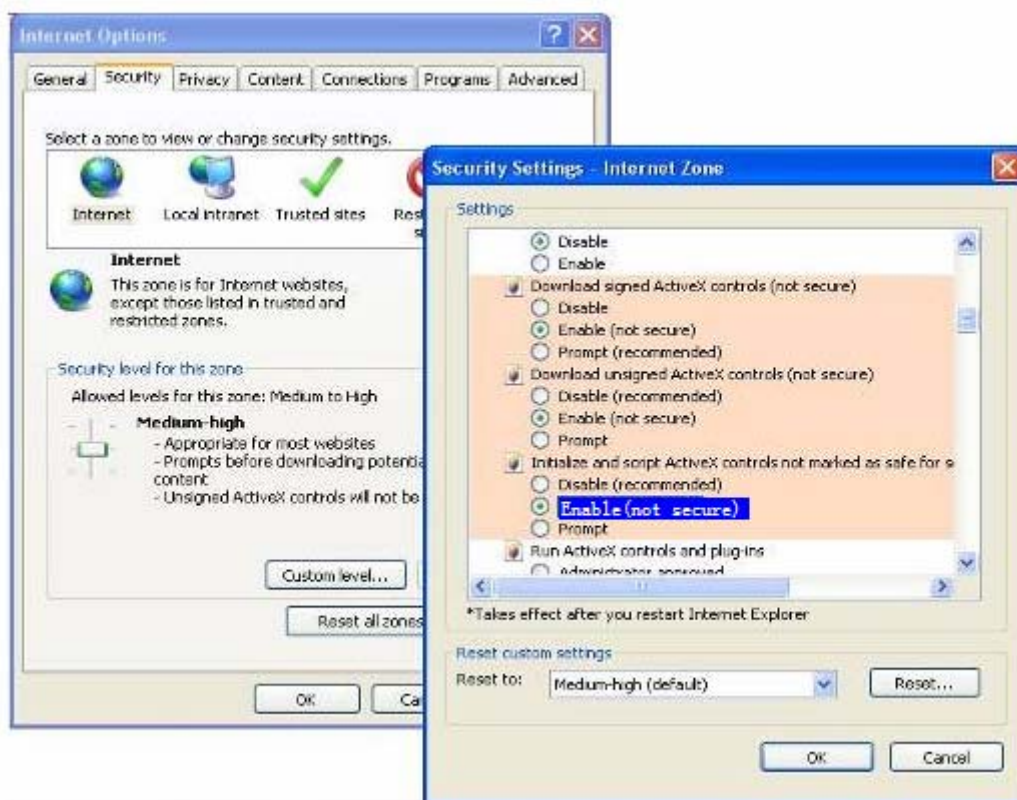

Figure 5.1

If you allow the ActiveX running, but still could not see living video. Please change another port number to try. Don't use port 80, use any port between 1024 and 49151.

Basic Network Settings	
LAN Settings	
IP Configuration Type:	Fixed IP Address
IP Address:	192.168.11.129
Subnet Mask:	255.255.255.0
Gateway:	192.168.11.1
DNS Configuration Type:	Manual DNS
Primary DNS:	192.168.11.1
Secondary DNS:	202.96.134.133
HTTP	
HTTP Port number:	80 (80 or 1024~49151)
RTSP Port number:	554 (554 or 1024~49151)
RTSP Permission checksum:	<input checked="" type="radio"/> On <input type="radio"/> Off (Note: You need to restart the machine, this setting will only take effect)
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

Figure 5.2

NOTE: Make sure that your firewall or anti-virus software does not block the camera or ActiveX. If you could not see video, please shut down firewall or anti-virus software to try again.

5.1.4 I cannot see the video on Firefox or Safari or Google chrome?

For Firefox, Safari and Google chrome, you should install Quick Time Player as the ActiveX controller, please configure the activex controller as the following picture:

Select Preferences—QuickTime Preferences...

Figure 5.3

Choose HTTP as the transport protocol.

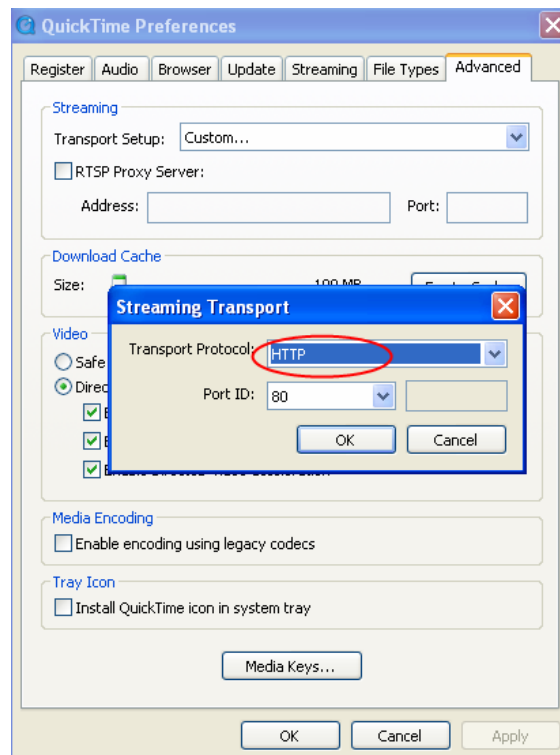

Figure 5.4

Choose Automatic as the transport setup, then click OK to save the settings.

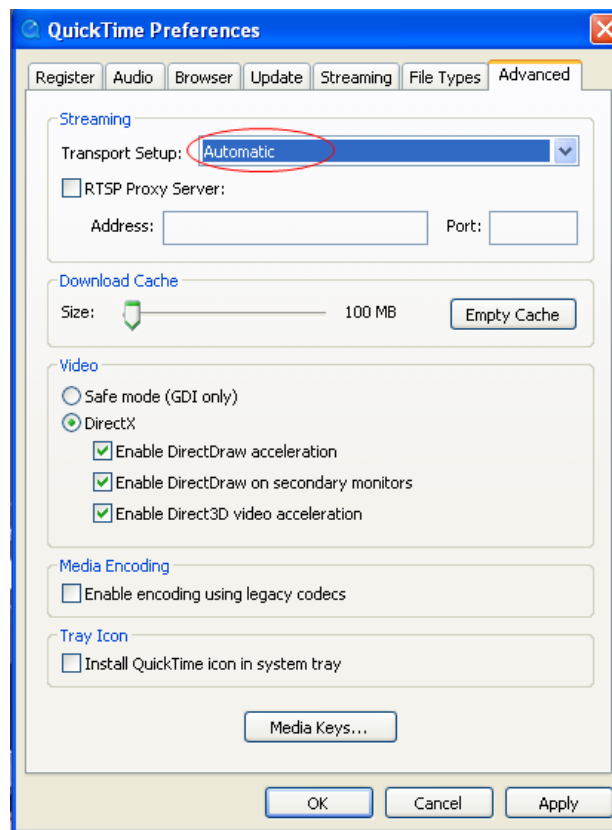

Figure 5.5

5.1.5 Can't access IP camera in internet

There are some reasons:

- 1 ActiveX controller is not installed correctly (Figure2.10-2.12)
 - 2 The port which camera used is blocked by Firewall or Anti-virus software. Please change another port number and try again. (Figure5.2)
 - 3 Port forwarding is not successful
- Check these settings and make sure they are correct.

5.1.6 UPnP always failed

UPnP only contains port forwarding in our recent software. Sometimes, it may be failed to do port forwarding automatically because of firewall or anti-virus software. It also has much relation with router's security settings. So we recommend you do port forwarding manually. You can view your camera in internet successfully after you do port forwarding manually in your router.

5.1.7 Camera can not connect wireless

If your camera could not connect wireless after you set wireless settings and plug out the cable. Please check whether your settings are correct or not.
Normally, camera can't connect wireless mainly because of wrong settings.

Make sure broadcast your SSID; use the same encryption for router and camera.

5.2 Default Parameters

Default network Parameters

IP address: obtain dynamically

Subnet mask: obtain dynamically

Gateway: obtain dynamically

DDNS: Disabled

Username and password

Default admin username: admin

Default password: admin

Default user username: user

Default password: user

Default guest username: guest

Default password: guest

5.3 Specifications

Specification		FI8602W
Image Sensor	Image Sensor	420TVL 1/3" SONY Color CCD Sensor
	Lens	f :6mm or 8mm or 12mm , F=1.2
	Mini. Illumination	0.1Lux
Audio	Input/Output	Linear Input/Output, which can realize two-way voice the intercom
	Audio Compression	G.711/G.726, Audio sampling Bit rate 128kbps ~ 2048Mbps
Video	Video Formats	Supports NTSC or PAL Formats
	Image Compression	H.264
	Image Frame Rate	25fps (PAL Formats) , 30fps (NTSC Formats) ,Down adjustable
	Resolution	D1 / CIF/ QCIF
	View	H.264 dual streaming
	Image adjust	The brightness, contrast is adjustable
	White balance	Automatic white balance
	Backlight compensation	Automatic backlight compensation
	SNR	>48DB (AGC OFF)
	Night visibility	Φ8mm 36 IR LEDs, Night visibility up to 50 meters
Network	Ethernet	One 10/100Mbps RJ-45
	Supported Protocol	TCP/IP、UDP/IP、HTTP、SMTP、FTP、DHCP、DDNS、UPNP、RTSP
	Wireless Standard	WIFI(IEEE802.11b/g/n)

	Support IP address	static IP address, dynamic IP address
Alarm	Alarm detection	The motion detecting, detection threshold settings
	Alarm inform	Support Email、FTP etc alarm inform way
Hardware Interface	POWER Interface	DC 12V/2.0A (EU,US,AU adapter or other types option, Power Consumption < 8 Watts
	Audio Input/Output Interface	One audio input jack, One audio output jack.
	Reset Buttons	One Reset
	Control Interface	one RS -485 port, support of transparent channel transmission
Environment	Operate Temper	0° ~ 55°C (32°F ~ 131°F)
	Operate Humidity	10% ~ 80% non-condensing
	Storage Temper	-10°C ~ 60° (14°F ~ 140°F)
	Storage Humidity	0% ~ 90% non-condensing
	Dimension	203X100x93mm
	Net Weight	1023g
	Gross Weight	1546g
PC Requirements	CPU	2.0GHZ or above (suggested 3.0GHz)
	Memory Size	256MB or above (suggested 1.0GHz)
	Display Card	64M or above
	Supported OS	Microsoft Windows 2000/XP/Vista ,Mac OS
	Browser	IE6 and above version or compatible browser, Firefox, Chrome, Safari or other standard browsers
Software	Upgrade	Upgrade from network
	Application Software	H.264 Camera Client
Certification	CE,FCC	

6 OBTAINING TECHNICAL SUPPORT

While we hope your experience with the IPCAM network camera is enjoyable and easy to use, you may experience some issues or have questions that this User's Guide has not answered. If you have problem with FOSCAM IP camera, please first contact FOSCAM reseller for solving the problems. If our reseller cannot provide service, please contact our service department: tech@foscam.com.
